

Question1

Write a working SAS code to read below dataset into SAS dataset data1 using Column input. Print data1.

California	36.9
Texas	24.8
New York	19.5
Florida	18.5
Illinois	12.9

Question2

Write a working SAS code to read below dataset into SAS dataset data2 using Formatted input. Print data2. (Choose appropriate informat and format)

California	36,961,664
Texas	24,782,302
New York	19,541,453
Florida	18,537,969
Illinois	12,910,409

Question3

Use SAS dataset diabetes.sas7bdat in your own permanent storage to

- 1) Create a new dataset diabetes in work library with variables Sex, Height and Weight be dropped.
- 2) Create a new variable Difference, $\text{Difference} = \text{PostGluc} - \text{FastGluc}$, and store it to dataset diabetes in work library. Label variable Difference as "Difference between PostGluc and FastGluc". Use PROC CONTENTS to display the descriptor portion of the dataset diabetes.
